ONIX DOI METADATA FOR MONOGRAPHS

This document specifies an ONIX subset with a number of newly-defined elements intended to provide a communication format for metadata related to the registration of DOIs for monographs. The specification allows for the registration of a DOI that is assigned to a monograph-as-work or a DOI that is assigned to a monograph-as-manifestation, ie it gives the option of registering one DOI only, regardless of the different forms – paper or electronic – in which the monograph appears, or of registering separate DOIs for each form.

The document also includes a message header and a pair of “start of message” and “end of message” elements. Please see ONIX for Books – Product Information Message – XML Message Specification for details of other ONIX XML conventions.

An ONIX Monograph DOI Registration message must carry either Monographic Work records only or Monographic Manifestation records only. Different message names are used in each case.

Throughout the document, text in dark red is used to indicate content that applies only to monographs-as-works; text in blue-green is used to indicate content that applies only to monographs-as-manifestations; text in light red indicates areas where there are outstanding queries or uncertainties.

Pages 28 to 30 show a simple example of an ONIX Monographic Product DOI Registration message and of an ONIX Monographic Work DOI Registration message.

This ONIX format was developed in association with the mEDRA Project, supported in its initial stages by the eContent programme of the European Union, and has been extended to meet additional requirements specified by Nielsen BookData, OPOCE (The Office for Official Publications of the European Communities) and MVB(Marketing- und Verlagsservice des Buchhandels GmbH).

1 The only corrections are to the colour-coding of text on pages 21 and 22, and to the wording in a few places where the word “product” was used in a context that applies both to a monographic work and to a product or manifestation.
<ONIXDOIMonographicWorkRegistrationMessage>
An ONIX DOI registration metadata message for monographic works is an XML document beginning with an XML label `<ONIXDOIMonographicWorkRegistrationMessage xmlns="http://www.editeur.org/onix/DOIMetadata/1.1">` (which includes an XML namespace declaration) and ending with an XML label `</ONIXDOIMonographicWorkRegistrationMessage>`.
The content of the message comprises one mandatory instance of the `<Header>` composite defined below, and one or more instances of the `<DOIMonographicWork>` record. Separate messages will be used to carry registration metadata for other types of material, e.g. serial articles.

<ONIXDOIMonographicProductRegistrationMessage>
An ONIX DOI registration metadata message for monographic products is an XML document beginning with an XML label `<ONIXDOIMonographicProductRegistrationMessage xmlns="http://www.editeur.org/onix/DOIMetadata/1.1">` (which includes an XML namespace declaration) and ending with an XML label `</ONIXDOIMonographicProductRegistrationMessage>`.
The content of the message comprises one mandatory instance of the `<Header>` composite defined below, and one or more instances of the `<DOIMonographicProduct>` record. Separate messages will be used to carry registration metadata for other types of material, e.g. serial articles.

**Header composite**
A group of data elements which together constitute a message header.

Reference name `<Header>`

**MMH.1 Sender company name**
The name of the sender organization, which should always be stated in a standard form agreed with the addressee. Mandatory and non-repeating.

Format Variable-length ASCII text, suggested maximum 30 characters
Reference name `<FromCompany>`
Example Mondadori

**MMH.2 Sender contact**
Free text giving the name, department, phone number, etc for a contact person in the sender organization who is responsible for the content of the message. Optional and non-repeating.

Format Variable-length ASCII text, suggested maximum 300 characters
Reference name `<FromPerson>`
Example Jackie Brown, 020 7979 6444

**MMH.3 Sender contact email address**
A text field giving the email address for a contact person in the sender organization who is responsible for the content of the message. Mandatory and non-repeating.

Format Variable-length ASCII text, suggested maximum 100 characters
Reference name `<FromEmail>`
Example jackie.brown@bigpublisher.co.uk
**MMH.4 Addressee company name**  
The name of the addressee organization, which should always be stated in a standard form agreed with the addressee. Mandatory and non-repeating.  
**Format**  
Variable-length ASCII text, suggested maximum 30 characters  
**Reference name**  
<ToCompany>  
**Example**  
mEDRA

---

**MMH.5 Message sequence number**  
A sequence number of the messages in a series sent between trading partners, to enable the receiver to check against gaps and duplicates. Optional and non-repeating.  
**Format**  
Variable-length integer  
**Reference name**  
<MessageNumber>  
**Example**  
1234

---

**MMH.6 Message repeat number**  
A number which distinguishes any repeat transmissions of a message. The original is numbered 1, and repeats are numbered 2, 3 etc. Optional and non-repeating.  
**Format**  
Variable-length integer  
**Reference name**  
<MessageRepeat>  
**Example**  
2

---

**MMH.7 Message creation date/time**  
The date on which the message is sent. Optionally, the time may be added, using the 24-hour clock. Mandatory and non-repeating.  
**Format**  
Eight or twelve numeric digits only (YYYYMMDD or YYYYMMDDHHMM)  
**Reference name**  
<SentDate>  
**Example**  
200005220230

---

**MMH.8 Message note**  
Free text giving additional information about the message. Optional and non-repeating.  
**Format**  
Variable-length ASCII text, suggested maximum 500 characters  
**Reference name**  
<MessageNote>  
**Example**  
New titles to be published September 2003

---

**End of header composite**
<DOIMonographicWork> record

A monographic work is described by a group of data elements beginning with an XML label <DOIMonographicWork> and ending with an XML label </DOIMonographicWork>.

Reference name <DOIMonographicWork>

<DOIMonographicProduct> record

A monographic product is described by a group of data elements beginning with an XML label <DOIMonographicProduct> and ending with an XML label </DOIMonographicProduct>.

Reference name <DOIMonographicProduct>

**MMG.1 Notification or update type code**

An ONIX code which indicates the type of notification or update which is being sent. Mandatory and non-repeating.

**Format** Fixed-length, two numeric digits.

**Code list**

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>06</td>
<td>New: a new registration request</td>
</tr>
<tr>
<td>07</td>
<td>Update: a complete replacement for a record previously sent</td>
</tr>
</tbody>
</table>

Reference name <NotificationType>

Example 06

**MMG.2 DOI**

**Format** Variable-length text, suggested maximum length 300 characters.

Reference name <DOI>

Example 10.1006/jmbi.1998.2354

**MMG.3 DOI website link**

The URL for the primary website to which the DOI will resolve. Mandatory and non-repeating.

**Format** Variable-length text, suggested maximum length 300 characters

Reference name <DOIWebsiteLink>

Example http://xyzbooks.com/0123456789.htm
Website composite

An optional and repeatable group of data elements which together identify and provide pointers to other webpages associated with the DOI to which the metadata package refers. It is envisaged that the composite will be used to give the URLs associated with particular service types for multiple resolution.

Reference name: <Website>

MMG.4 Website purpose

An ONIX code which identifies the role or purpose of the website which is linked through the <WebsiteLink> element. Mandatory and non-repeating.

Format: Fixed-length, two numeric digits

Code list: Code values to be defined to cover multiple resolution for different service types

Reference name: <WebsiteRole>

Example: http://xyzbooks.com/0123456789/service3.htm

End of website composite

MMG.6 DOI structural type

An IDF value identifying the structural type of the entity to which the DOI in this metadata package is registered. Optional and non-repeating. This element is specified to be optional as it will not necessarily be required in metadata submitted for registration. Instead, it may be generated by the DOI registration agency by mapping from other content.

Format: Variable-length character string values defined by IDF

Code list: The only permitted value for DOI registrations for monographic works is Abstraction

The permitted values for DOI registrations for monographic products are PhysicalFixation, DigitalFixation

Reference name: <DOIStructuralType>

Example: PhysicalFixation
**MMG.7 DOI mode**

An IDF value identifying the mode of the entity to which the DOI in this metadata package is registered. Optional and non-repeating. This element is specified to be optional as it will not necessarily be required in metadata submitted for registration. Instead, it may be generated by the DOI registration agency by mapping from other content.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length character string values defined by IDF</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>The only permitted value for DOI registrations for monographic works is Abstract</td>
</tr>
<tr>
<td></td>
<td>The permitted values for DOI registrations for monographic products are Visual, Audio, Audiovisual</td>
</tr>
</tbody>
</table>

Reference name: `<DOIMode>`

Example: `Visual`

**MMG.8 DOI registrant name**

The name of the person or corporate body responsible for registering the DOI to which this ONIX metadata package refers. Mandatory and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum length 100 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;RegistrantName&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td><code>Mondadori</code></td>
</tr>
</tbody>
</table>

**MMG.9 DOI registration authority**

An IDF value identifying the registration agency with which the DOI in this ONIX metadata package is registered. Optional and non-repeating. This element is specified to be optional as it will NOT be required in metadata submitted by publishers for registration.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length character string values defined by IDF</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>Values so far defined are: mEDRA, NielsenBookData, OPOCE</td>
</tr>
<tr>
<td>Reference name</td>
<td><code>&lt;RegistrationAuthority&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td><code>mEDRA</code></td>
</tr>
</tbody>
</table>
NOTE: the <WorkIdentifier> and <ProductIdentifier> composites specified on this and the following page are to be used for additional identifiers by which the monograph which is being registered for DOI assignment is known.

**Work identifier composite**

A group of data elements which together define the identifier of a work in accordance with a specified scheme, and used here for any additional identifiers for a monograph-as-work. In ONIX DOI registrations for monographs-as-works, one occurrence might carry the ISTC assigned to the work, if known. Optional and repeatable if the work has more than one identifier of different types. Not used in a record for a monograph-as-manifestation.

Reference name  <WorkIdentifier>

**MMG.10  Work identifier type code**

An ONIX code identifying the scheme from which the identifier in the <IDValue> element is taken. Mandatory in each occurrence of the <WorkIdentifier> composite, and non-repeating.

Format  Fixed-length, 2 numeric digits
Code list  01  Proprietary, eg a publisher's internal work identifier
11  ISTC
Reference name  <WorkIDType>
Example  11

**MMG.11  Identifier value**

An identifier of the type specified in the <WorkIDType> element. Mandatory in each occurrence of the <WorkIdentifier> composite, and non-repeating.

Format  According to the identifier type specified in <WorkIDType>
Reference name  <IDValue>
Example  12345678

**End of work identifier composite**
See note on previous page.

**Product identifier composite**

A repeatable group of data elements which together define the identifier of a product in accordance with a specified scheme, and allowing new types of product identifier to be included without defining additional data elements. In ONIX DOI registrations for monographic products, the composite is not mandatory, but one occurrence should carry the ISBN assigned to the product, if applicable.

Reference name  

```
<ProductIdentifier>
```

**MMG.12 Product identifier type code**

An ONIX code identifying the scheme from which the identifier in the `<IDValue>` element is taken. Mandatory in each occurrence of the `<ProductIdentifier>` composite, and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Fixed-length, 2 numeric digits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>01    Proprietary, a publisher’s or wholesaler’s product number</td>
</tr>
<tr>
<td></td>
<td>02    ISBN-10 (unhyphenated)</td>
</tr>
<tr>
<td></td>
<td>03    EAN-13</td>
</tr>
<tr>
<td></td>
<td>15    ISBN-13 (unhyphenated)</td>
</tr>
</tbody>
</table>

Reference name  

```
<ProductIDType>
```

Example  

```
02
```

**MMG.13 Identifier value**

An identifier of the type specified in the `<ProductIDType>` element. Mandatory in each occurrence of the `<ProductIdentifier>` composite, and non-repeating.

<table>
<thead>
<tr>
<th>Reference name</th>
<th><code>&lt;IDValue&gt;</code></th>
</tr>
</thead>
<tbody>
<tr>
<td>Example</td>
<td>12345678</td>
</tr>
</tbody>
</table>

**End of product identifier composite**

**MMG.14 Product form code**

An ONIX code which indicates the primary form of the product. Mandatory in a `<DOI-MonographicProduct>` record, and non-repeating. Not used in a `<DOI-MonographicWork>` record.

<table>
<thead>
<tr>
<th>Format</th>
<th>Fixed-length, two letters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>ONIX List 7: see separate documentation</td>
</tr>
<tr>
<td>Reference name</td>
<td><code>&lt;ProductForm&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>BB Hardback book</td>
</tr>
</tbody>
</table>
### MMG.15 Epublication format code
An ONIX code identifying the file format of an epublication. Optional in a `<DOIMonographicProduct>` record, and non-repeating; and can occur only if the `<ProductForm>` code is `DG` or `DH`. Not used in a `<DOIMonographicWork>` record.

<table>
<thead>
<tr>
<th>Format</th>
<th>Fixed-length, 2 numeric digits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>ONIX List 11: see separate documentation</td>
</tr>
<tr>
<td>Reference name</td>
<td><code>&lt;EpubFormat&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>02</td>
</tr>
</tbody>
</table>

### MMG.16 Epublication format version number
A version number which applies to an epublication format. Optional in a `<DOIMonographicProduct>` record, and non-repeating; and can occur only if the `<EpubFormat>` field is present. Not used in a `<DOIMonographicWork>` record.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum 10 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;EpubFormatVersion&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>2.1</td>
</tr>
</tbody>
</table>

### MMG.17 Epublication format description
A free text description of an epublication format. Optional in a `<DOIMonographicProduct>` record, and non-repeating. This element can occur only if the `<ProductForm>` code is `DG` or `DH`; but it does not require the `<EpubFormat>` field to be present. Not used in a `<DOIMonographicWork>` record.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum 200 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;EpubFormatDescription&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td><em>Screen optimized PDF, with low-res figures</em></td>
</tr>
</tbody>
</table>
**Note:** The `<Series>` composite is included here for use in both `<DOIMonographicWork>` and `<DOIMonographicProduct>` records, but special care should be taken when deciding whether to use it in a “work” record. “Series” detail should only be included in a `<DOIMonographicWork>` record if the work belongs inherently to a series that is grouped under the same collective title even if manifesting in different publications or forms of publication.

### Series composite

A group of data elements which together describe a series of which a monographic work or product is part. Optional, and repeatable if the work or product belongs to more than one series.

Reference name  
`<Series>`

### Series identifier composite

A repeatable group of data elements which together define an identifier of a series or subseries. The composite is optional, and may only repeat if two or more identifiers of different types are sent. It is not permissible to have two identifiers of the same type. In a `<DOIMonographicWork>`, the composite is to be used only if the series has an established identifier at “work” level. (ISSNs are correctly assigned at “serial version” level, with a separate ISSN for print and electronic versions.)

Reference name  
`<SeriesIdentifier>`

**MMG.18 Series identifier type code**

An ONIX code identifying the scheme from which the identifier in the `<IDValue>` element is taken. Mandatory in each occurrence of the `<SeriesIdentifier>` composite, and non-repeating.

| Format | Fixed-length, two numeric digits |
| Code list | Selected codes from ONIX List 13: |
| `01` | Proprietary |
| `02` | ISSN (unhyphenated): in `<DOIMonographicProduct>` records only |
| `06` | DOI |

Reference name  
`<SeriesIDType>`

Example  
`01`

**MMG.19 Identifier type name**

A name which identifies a proprietary identifier scheme when, and only when, the code in the `<SeriesIDType>` field indicates a proprietary scheme, eg a publisher’s own code. Optional and non-repeating.

| Format | Free text, suggested maximum length 50 characters |
| Reference name | `<IDTypeName>` |
| Example | `Springer` |
### MMG.20 Identifier value

An identifier of the type specified in the `<SeriesIDType>` field. Mandatory in each occurrence of the `<SeriesIdentifier>` composite, and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>According to the identifier type specified in the <code>&lt;SeriesIDType&gt;</code> field.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;IDValue&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>12345678</td>
</tr>
</tbody>
</table>

### End of series identifier composite

### MMG.21 Series title

The full title of the series, without abbreviation or abridgement. Non-repeating. The `<TitleOfSeries>` tag may optionally carry any of the following ONIX attributes: `textformat`, `language`, `transliteration`, `textcase`.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum length 300 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;TitleOfSeries&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td><code>Blue Guides</code></td>
</tr>
</tbody>
</table>
Title composite

A group of data elements which together give the text of a title, including a subtitle where applicable, and specify its type. The <Title> tag may optionally carry any of the following ONIX attributes: textformat, language, transliteration, textcase, where these are shared by all text elements within the composite. The <Title> composite is mandatory in each <DOIMonographicWork> or <DOIMonographicProduct> record, and is repeatable if more than one form of the title is sent.

Reference name <Title>

MMG.22 Title type code

An ONIX code indicating the type of a title. Mandatory in each occurrence of the <Title> composite, and non-repeating. Additional types of title can be defined by adding code values.

Format Fixed-length, two numeric digits
Code list
01 Distinctive title, in full
05 Abbreviated or truncated title
Reference name <TitleType>
Example 01

MMG.23 Title text

The text of the title specified by the <TitleType> code. Mandatory in each occurrence of the <Title> composite, and non-repeating.

Format Variable-length text, suggested maximum 600 characters
Reference name <TitleText>
Example Nicholas Nickleby

MMG.24 Subtitle

The full text of a subtitle, if any. “Subtitle” means any added words which appear with the title given in an occurrence of the <Title> composite, and which amplify and explain the title, but which are not considered to be part of the title itself. Optional and non-repeating.

Format Variable-length text, suggested maximum 300 characters
Reference name <Subtitle>
Example The Russian Revolution 1891-1924

End of title composite
**Contributor composite**

A repeatable group of data elements which together describe a personal or corporate contributor to the monograph. Each instance of the `<Contributor>` composite must carry a personal name (in one or both of the two forms supported in MMG.22 and MMG.23) or a corporate name (MMG.24), or an `<UnnamedPersons>` element (MMG.25), but combinations of these elements are not permitted.

**MMG.24 Contributor sequence number**

A number which specifies a single overall sequence of contributor names. Optional and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Reference name</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Variable-length integer, 1, 2, 3 etc, suggested maximum length 3 digits</td>
<td><code>&lt;SequenceNumber&gt;</code></td>
<td>3</td>
</tr>
</tbody>
</table>

**MMG.25 Contributor role**

An ONIX code indicating the role played by a person or corporate body in the creation of the monograph. Mandatory in each occurrence of a `<Contributor>` composite, and may be repeated if the same person or corporate body has more than one role in relation to the monograph.

<table>
<thead>
<tr>
<th>Format</th>
<th>Code list</th>
<th>Reference name</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fixed-length, one letter and two numeric digits</td>
<td>ONIX List 17: see separate documentation</td>
<td><code>&lt;ContributorRole&gt;</code></td>
<td>A01</td>
</tr>
</tbody>
</table>

**MMG.26 Person name**

The name of a person who contributed to the creation of the monograph, unstructured, and presented in normal order. Optional and non-repeating: see introductory text for the `<Contributor>` composite above for valid options.

<table>
<thead>
<tr>
<th>Format</th>
<th>Reference name</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Variable-length text, suggested maximum length 100 characters</td>
<td><code>&lt;PersonName&gt;</code></td>
<td>James J. Johnson III</td>
</tr>
</tbody>
</table>

**MMG.27 Person name, inverted**

The name of a person who contributed to the creation of the monograph, presented in inverted order, with the element used for alphabetical sorting placed first. Optional and non-repeating: see introductory text for the `<Contributor>` composite above for valid options.

<table>
<thead>
<tr>
<th>Format</th>
<th>Reference name</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Variable-length text, suggested maximum length 100 characters</td>
<td><code>&lt;PersonNameInverted&gt;</code></td>
<td>Johnson, James J., III</td>
</tr>
</tbody>
</table>
MMG.28 Corporate contributor name
The name of a corporate body which contributed to the creation of the monograph, unstructured. Optional and non-repeating: see introductory text for the `<Contributor>` composite above for valid options.
Format Variable-length text, suggested maximum length 200 characters
Reference name `<CorporateName>`
Example Good Housekeeping Institute

MMG.29 Unnamed person(s)
An ONIX code allowing a positive indication to be given when authorship is unknown or anonymous, or when as a matter of editorial policy only a limited number of contributors are named. Optional and non-repeating: see introductory text for the `<Contributor>` composite above for valid options.
Format Fixed-length, two numeric digits
Code list
01 Unknown
02 Anonymous
03 et al (“and others”, when additional contributors are not listed)
04 Various authors (when the monograph combines a number of titles by different authors)
Reference name `<UnnamedPersons>`
Example 02 Anonymous

End of contributor composite

MMG.30 Edition type code
An ONIX code indicating the type of a version or edition. Optional, and repeatable if the edition has characteristics of two or more types (eg revised and annotated).
Format Fixed-length, three upper-case letters
Code list ONIX List 21: see separate documentation
Reference name `<EditionTypeCode>`
Example ILL

MMG.31 Edition number
The number of a numbered edition. Optional and non-repeating. Normally sent only for the second and subsequent editions of a work, but by agreement between parties to an ONIX exchange a first edition may be explicitly numbered.
Format Variable-length integer, suggested maximum length 4 digits.
Reference name `<EditionNumber>`
Example 3
**MMG.32 Edition statement**

A short free-text description of a version or edition. Optional and non-repeating. When used, the `<EditionStatement>` must carry a complete description of the nature of the edition, ie it should not be treated as merely supplementary to an `<EditionTypeCode>` or an `<EditionNumber>`. The `<EditionStatement>` should describe features of the content of the edition, and should *not* include aspects such as rights or market restrictions (which are covered elsewhere in a full ONIX record).

**Format**
Variable-length text, suggested maximum length 100 characters.

**Reference name**
`<EditionStatement>`

**Example**
3rd edition, revised with an introduction and notes

---

**Language composite**

A group of data elements which together represent a language, and specify its role, used here to represent the language of a monograph. Optional and repeatable.

**Reference name**
`<Language>`

---

**MMG.33 Language role**

An ONIX code indicating the “role” of a language in the context of the ONIX record. Mandatory in each occurrence of the `<Language>` composite, and non-repeating.

**Format**
Fixed-length, two numeric digits

**Code list**
ONIX List 22: see separate documentation

**Reference name**
`<LanguageRole>`

**Example**
01

---

**MMG.34 Language code**

An ISO code indicating a language. Mandatory in each occurrence of the `<Language>` composite, and non-repeating.

**Format**
Fixed-length, three lower-case letters. Note that ISO 639 specifies that these codes should always be in lower-case.

**Code list**
ONIX List 74 (ISO 639-2/B three-letter codes): see separate documentation

**Reference name**
`<LanguageCode>`

**Example**
eng

---

**End of language composite**
**MMG.35  Approximate number of pages**

An indication of the total number of pages in a book or other printed product. This is not intended to represent a precise count of numbered and unnumbered pages. It is usually sufficient to take the number from the last numbered page. If there are two or more separate numbering sequences (e.g. xviii + 344), the numbers in each sequence may be added together to make an overall total (in this case 362), but do not count unnumbered pages except if the book does not have numbered pages at all.

For multi-volume books, enter the total for all the volumes combined.

This field is optional, but it is normally required for a printed book unless the `<PagesRoman>` and `<PagesArabic>` elements are used, and is non-repeating.

**Format**

Variable length integer, suggested maximum length 6 digits.

**Reference name**

<NumberOfPages>

**Example**

442

---

**MMG.36  Number of pages, roman**

The number of pages numbered in roman numerals. The `<PagesRoman>` and `<PagesArabic>` elements together represent an alternative to `<NumberOfPages>` where there is a requirement to specify these numbering sequences separately. For most ONIX applications, however, `<NumberOfPages>` will be preferred. Optional and non-repeating.

**Format**

Variable length alphabetic, suggested maximum length 10 characters.

**Reference name**

PagesRoman

**Example**

xxiii

---

**MMG.37  Number of pages, Arabic**

The number of pages numbered in Arabic numerals. Optional and non-repeating.

**Format**

Variable length numeric, suggested maximum length 6 characters.

**Reference name**

PagesArabic

**Example**

442
Extent composite

A repeatable group of data elements which together describe an extent pertaining to the product.
Reference name    <Extent>

MMG.38  Extent type code

An ONIX code which identifies the type of extent carried in the composite, eg file size for a digital product. Mandatory in each occurrence of the <Extent> composite, and non-repeating.
Format            Fixed-length, two numeric digits.
Code list         ONIX List 23: see separate documentation
Reference name    <ExtentType>
Example            22    File size

MMG.39  Extent value

The numeric value of the extent specified in <ExtentType>. Mandatory in each occurrence of the <Extent> composite, and non-repeating.
Format            Numeric, with decimal point where required, as specified in field MMG.38
Reference name    <ExtentValue>
Example            2.5

MMG.40  Extent unit

An ONIX code indicating the unit used for the <ExtentValue> and the format in which the value is presented. Mandatory in each occurrence of the <Extent> composite, and non-repeating.
Format            Fixed-length, two numeric digits
Code list         ONIX List 24: see separate documentation
Reference name    <ExtentUnit>
Example            19    Megabytes

End of extent composite
Main subject composite

An optional and repeatable group of data elements which together describe a main subject classification or subject heading which is taken from a recognized scheme.

Reference name  <MainSubject>

MMG.41 Main subject scheme identifier

An ONIX code which identifies a subject scheme which is designated for use in a <MainSubject> composite. Mandatory in each occurrence of the composite, and non-repeating.

When the scheme in the code list is annotated "Code", use the associated <SubjectCode> element to carry the value (if so required, the <SubjectHeadingText> element can be used simultaneously to carry the text equivalent of the code). When the scheme is annotated "Text", use the <SubjectHeadingText> element to carry the text of the subject heading.

Format  Fixed-length, two numeric digits.
Code list  ONIX List 26: see separate documentation
Reference name  <MainSubjectSchemeIdentifier>
Example  25

MMG.42 Subject scheme version number

A number which identifies a version or edition of the subject scheme specified in the associated <MainSubjectSchemeIdentifier> element. Optional and non-repeating.

Format  Free form. Suggested maximum length 10 characters
Reference name  <SubjectSchemeVersion>
Example  2.1

MMG.43 Subject code

A subject class or category code from the scheme specified in the <MainSubjectSchemeIdentifier> element. Either <SubjectCode> or <SubjectHeadingText> or both must be present in each occurrence of the <MainSubject> composite. Non-repeating.

Format  Variable-length, alphanumeric, suggested maximum length 20 characters.
Code list  The scheme specified in <MainSubjectSchemeIdentifier>
Reference name  <SubjectCode>
Example  623.95

MMG.44 Subject heading text

The text of a heading taken from the scheme specified in the <MainSubjectSchemeIdentifier> element; or the text equivalent to the <SubjectCode> value, if both code and text are sent. Either <SubjectCode> or <SubjectHeadingText> or both must be present in each occurrence of the <MainSubject> composite. Non-repeating.

Format  Variable-length text, suggested maximum length 100 characters.
Reference name  <SubjectHeadingText>
Example  Labor and industrial relations

End of main subject composite
**Additional subject composite**

An optional and repeatable group of data elements which together describe a subject classification or subject heading which is additional to the BISAC, BIC or other main subject category.

Reference name  

---

**MMG.45 Subject scheme identifier**

An ONIX code which identifies the subject scheme which is used in an occurrence of the `<Subject>` composite. Mandatory in each occurrence of the composite, and non-repeating.

When the scheme in the code list is annotated "Code", use the associated `<SubjectCode>` element to carry the value (if so required, the `<SubjectHeadingText>` element can be used simultaneously to carry the text equivalent of the code). When the scheme is annotated "Text", use the `<SubjectHeadingText>` element to carry the text of the subject heading.

Format  

| Code list | ONIX List 27: see separate documentation |

Reference name `<SubjectSchemeIdentifier>`

Example 03

---

**MMG.46 Proprietary subject scheme name**

A name identifying a proprietary subject scheme when `<SubjectSchemeIdentifier>` is coded “24”. Optional and non-repeating.

Format  

Variable-length text, suggested maximum length 100 characters.

Reference name `<SubjectSchemeName>`

Example 21

---

**MMG.47 Subject scheme version number**

A number which identifies a version or edition of the subject scheme specified in the associated `<SubjectSchemeIdentifier>` element. Optional and non-repeating.

Format  

Free form. Suggested maximum length 10 characters, for consistency with other version number elements.

Reference name `<SubjectSchemeVersion>`

Example 21

---

**MMG.48 Subject code**

A subject class or category code from the scheme specified in the `<SubjectSchemeIdentifier>` element. Either `<SubjectCode>` or `<SubjectHeadingText>` or both must be present in each occurrence of the `<Subject>` composite. Non-repeating.

Format  

Variable-length, alphanumeric, suggested maximum length 20 characters.

Code list  

The scheme specified in the associated `<SubjectSchemeIdentifier>` element.

Reference name `<SubjectCode>`

Example 623.95
### MMG.49 Subject heading text

The text of a subject heading taken from the scheme specified in the `<SubjectSchemeIdentifier>` element, or of free language keywords if the scheme is specified as "keywords"; or the text equivalent to the `<SubjectCode>` value, if both code and text are sent. Either `<SubjectCode>` or `<SubjectHeadingText>` or both must be present in each occurrence of the `<Subject>` composite. Non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum length 100 characters.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;SubjectHeadingText&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>Labor and industrial relations</td>
</tr>
</tbody>
</table>

### End of additional subject composite

### MMG.50 Audience code

An ONIX code that identifies the broad audience or readership for whom a publication is intended. Optional, and repeatable if the publication is intended for two or more groups.

<table>
<thead>
<tr>
<th>Format</th>
<th>Fixed-length, two numeric digits.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>ONIX List 28: see separate documentation</td>
</tr>
<tr>
<td>Reference name</td>
<td><code>&lt;AudienceCode&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>04</td>
</tr>
</tbody>
</table>
Other text composite

An optional and repeatable group of data elements that carries descriptive text related to the publication. Used here either for a short annotation or for a longer description.
Reference name  <OtherText>

<table>
<thead>
<tr>
<th>MMG.51 Other text type code</th>
</tr>
</thead>
<tbody>
<tr>
<td>An ONIX code which identifies the type of text which is sent in the <code>&lt;Text&gt;</code> element. Mandatory in each occurrence of the <code>&lt;OtherText&gt;</code> composite, and non-repeating.</td>
</tr>
<tr>
<td>Format</td>
</tr>
<tr>
<td>Code list</td>
</tr>
<tr>
<td>Reference name</td>
</tr>
<tr>
<td>Example</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>MMG.52 Other text</th>
</tr>
</thead>
<tbody>
<tr>
<td>The text specified in the <code>&lt;TextTypeCode&gt;</code> element. In this context, mandatory in any occurrence of the <code>&lt;OtherText&gt;</code> composite, and non-repeating.</td>
</tr>
<tr>
<td>The <code>&lt;Text&gt;</code> element may carry any of the following ONIX attributes: <code>textformat</code>, <code>language</code>, <code>transliteration</code>, <code>textcase</code>.</td>
</tr>
<tr>
<td>For consistency with full ONIX messages, XHTML is enabled in this element: see ONIX for Books – Product Information Message – XML Message Specification, Section 7</td>
</tr>
<tr>
<td>Format</td>
</tr>
<tr>
<td>Reference name</td>
</tr>
<tr>
<td>Example</td>
</tr>
</tbody>
</table>

End of other text composite

<table>
<thead>
<tr>
<th>MMG.53 Imprint or brand name</th>
</tr>
</thead>
<tbody>
<tr>
<td>The full name of the imprint or brand under which the product is issued, as it appears on the title page of a book or in a corresponding position on a non-book product. Optional and non-repeating.</td>
</tr>
<tr>
<td>Format</td>
</tr>
<tr>
<td>Reference name</td>
</tr>
<tr>
<td>Example</td>
</tr>
</tbody>
</table>
### Publisher composite
A group of data elements which together identify an entity which is associated with the publishing of a product. Optional and repeatable. Each occurrence of the composite must carry a publishing role code and a publisher name.

**Reference name**  
<Publisher>

### MMG.54 Publishing role code
An ONIX code which identifies a role played by an entity in the publishing of a product. Mandatory in each occurrence of the `<Publisher>` composite, and non-repeating.

**Format**  
Fixed-length, two numeric digits.

**Code list**
- 01 Publisher
- 02 Co-publisher

**Reference name**  
<PublishingRole>

**Example**  
02

### MMG.55 Publisher name
The name of an entity associated with the publishing of a product. Mandatory in each occurrence of the `<Publisher>` composite, and non-repeating.

**Format**  
Variable length text, suggested maximum length 100 characters.

**Reference name**  
<PublisherName>

**Example**  
Reed International Books

### End of publisher composite

### MMG.56 Country of publication
A code identifying the country where the product is published. Mandatory and non-repeating.

**Format**  
Fixed-length, two upper-case letters. Note that ISO 3166 specifies that these codes should always be in upper-case.

**Code list**
ONIX List 91 (ISO 3166-1 two-letter codes): see separate documentation

**Reference name**  
<CountryOfPublication>

**Example**  
US

### MMG.57 Publication date
The date of first publication of this product in the country of publication (that is, under the current ISBN or other identifier, as distinct from the date of first publication of the work). In advance information, this will be an expected date, which should be replaced by the actual date of publication when known. The date should be given as precisely as possible, but in early notifications a month and year are sufficient; and for backlist titles the year of publication is sufficient.
Mandatory and non-repeating.

**Format**  
Four, six or eight numeric digits (YYYY, YYYYMM, or YYYYMMDD).

**Reference name**  
/PublicationDate>

**Example**  
20010315
Copyright statement composite

An optional and repeatable group of data elements which together represent a structured copyright statement for the monograph.

Reference name  <CopyrightStatement>

MMG.58  Copyright year

The copyright year as it appears in a copyright statement on the monograph. Mandatory in each occurrence of the <CopyrightStatement> composite, and repeatable if several years are listed.

Format  Date as year only (YYYY)
Reference name  <CopyrightYear>
Example  2003

Copyright owner composite

A repeatable group of data elements which together name a copyright owner. At least one occurrence is mandatory in each occurrence of the <CopyrightStatement> composite. Each occurrence of the <CopyrightOwner> composite must carry a single name (personal or corporate). (In a full ONIX record, an identifier may also be used.)

Reference name  <CopyrightOwner>

MMG.59  Person name

The name of a person, used here for a personal copyright holder. Non-repeating. One occurrence of either <PersonName> or <CorporateName>, but not both, must be present in each occurrence of the <CopyrightStatement>.

Format  Variable-length text, suggested maximum length 100 characters
Reference name  <PersonName>
Example  James J. Johnson III

MMG.60  Corporate name

The name of a corporate body, used here for a corporate copyright holder. Non-repeating.

Format  Variable-length text, suggested maximum length 200 characters
Reference name  <CorporateName>
Example  Johnson & Johnson Inc

End of copyright owner composite

End of copyright statement composite
## Related work composite

A group of data elements which together identify a work which has a specified relationship to the monograph which is described in the ONIX metadata package. Optional, and repeatable if the monograph is linked to more than one related work. The mandatory content of an occurrence of the `<RelatedWork>` composite is a `<RelationCode>` and a work identifier.

Reference name  
 `<RelatedWork>`

### MMG.61 Relation code

An ONIX code which identifies the nature of the relationship between two entities, which may be either works or manifestations of works. Mandatory in each occurrence of the `<RelatedWork>` composite, and non-repeating. In the code lists below, "X" represents the related work that is identified in an occurrence of the composite.

**Format**  
Fixed length, two numeric digits

| Code list (in records describing a monograph-as-work) |  
|-------------------------------|-------------------------------|
| Format | Fixed length, two numeric digits |  
| Code list (in records describing a monograph-as-manifestation) |  
| 80 | Includes | Includes a manifestation of X |
| 81 | Is part of | Is a manifestation of part of X |
| 82 | Is a new version of | Is a manifestation of a new version of X, with different content |
| 83 | Has a new version | Is a manifestation of a work that has a new version X, with different content |
| 85 | Is a different language version of | Is a manifestation of a work that is a different language version of X |
| 86 | Is a resource about | Is a manifestation of a work that is a resource about X |
| 87 | Is continued by | Is a manifestation of a work that is continued by X |
| 88 | Is a continuation of | Is a manifestation of a work that is a continuation of X |

<table>
<thead>
<tr>
<th>Reference name</th>
<th><code>&lt;RelationCode&gt;</code></th>
</tr>
</thead>
<tbody>
<tr>
<td>Example</td>
<td>81 Is part of</td>
</tr>
</tbody>
</table>
**Work identifier composite**

A group of data elements which together define the identifier of a work in accordance with a specified scheme, and allowing other types of work identifier for a related work to be included without defining additional data elements. One occurrence is mandatory in each instance of the `<RelatedWork>` composite. Repeatable if the work has more than one identifier of different types.

Reference name  <WorkIdentifier>

---

**MMG.62 Work identifier type code**

An ONIX code identifying the scheme from which the identifier in the `<IDValue>` element is taken. Mandatory in each occurrence of the `<WorkIdentifier>` composite, and non-repeating.

Format Fixed-length, 2 numeric digits

Code list  
01  Proprietary, eg a publisher’s work identifier  
06  DOI  
11  ISTC

Reference name  <WorkIDType>

Example 06 DOI

---

**MMG.63 Identifier value**

An identifier of the type specified in the `<WorkIDType>` element. Mandatory in each occurrence of the `<WorkIdentifier>` composite, and non-repeating.

Format According to the identifier type specified in `<WorkIDType>`

Reference name  `<IDValue>`

Example 12345678

---

**End of work identifier composite**

**End of related work composite**
## Related product composite

A group of data elements which together identify a product (or “manifestation”) which has a specified relationship to the monograph which is described in the ONIX metadata package. Optional, and repeatable if the monograph is linked to two or more related products. The minimum required content of an occurrence of the `<RelatedProduct>` composite is a `<RelationCode>` and a product identifier.

### Reference name

`<RelatedProduct>`

---

## MMG.64 Relation code

An ONIX code which identifies the nature of the relationship between two entities, which may be either works or manifestations of works. Mandatory in each occurrence of the `<RelatedProduct>` composite, and non-repeating. In the code lists below, “Y” represents the related product or manifestation that is identified in an occurrence of the composite.

### Format

Fixed length, two numeric digits

<table>
<thead>
<tr>
<th>Code list (in records describing a monograph-as-work)</th>
<th>Format</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>80 Includes</td>
<td>Includes the work manifested in Y</td>
<td>82 Is a new version of Is a new version of the work manifested in Y, with different content</td>
</tr>
<tr>
<td>81 Is part of</td>
<td>Is part of the work manifested in Y</td>
<td></td>
</tr>
<tr>
<td>82 Is a new version of</td>
<td>Is a new version</td>
<td></td>
</tr>
<tr>
<td>83 Has a new version</td>
<td>Has a new version manifested in Y, with different content</td>
<td></td>
</tr>
<tr>
<td>85 Is a different language version of</td>
<td>Is a different language version of the work manifested in Y</td>
<td></td>

<td></td>
</tr>
</tbody>
</table>

**Example**

82
**Product identifier composite**

A repeatable group of data elements which together define the identifier of a product in accordance with a specified scheme, and allowing other types of product identifier for a related product to be included without defining additional data elements. Mandatory in each occurrence of the `<RelatedProduct>` composite. Repeatable only if two different identifiers (eg DOI and ISBN) for the same related item are sent.

Reference name: `<ProductIdentifier>`

---

**MMG.65 Product identifier type code**

An ONIX code identifying the scheme from which the identifier in the `<IDValue>` element is taken. Mandatory in each occurrence of the `<ProductIdentifier>` composite, and non-repeating.

Format: Fixed-length, 2 numeric digits

Code list:

- 01 Proprietary, a publisher’s or wholesaler’s product number
- 02 ISBN-10 (unhyphenated)
- 03 EAN-13
- 06 DOI
- 10 SICI
- 15 ISBN-13 (unhyphenated)

Reference name: `<ProductIDType>`

Example: 02

---

**MMG.66 Identifier value**

An identifier of the type specified in the `<ProductIDType>` element. Mandatory in each occurrence of the `<ProductIdentifier>` composite, and non-repeating.

Format: According to the identifier type specified in `<ProductIDType>`

Reference name: `<IDValue>`

Example: 12345678

---

End of product identifier composite

End of related product composite

End of `<DOI:MonographicWork>` record

End of `<DOI:MonographicProduct>` record
Example of an ONIX DOI Monographic Product Registration Message

This example shows only elements that might be included in a registration package sent by a publisher, i.e., it does not carry DOI-related elements that the registration agency itself might generate.

Note that a valid DOI Metadata message must include a namespace declaration on the top-level element with the following URI: http://www.editeur.org/onix/DOIMetadata/1.1. The example below shows the namespace declaration in the first line. For further technical information on the purpose and use of namespaces see the W3C Recommendation 'Namespaces in XML' (http://www.w3.org/TR/REC-xml-names/).

```xml
